Professional Summary

Results-driven **Java Full Stack Developer** with hands-on experience building production-grade web applications using **Java**, **Spring Boot**, **Microservices Architecture**, **REST APIs**, **ExpressJS** and **ReactJS**. **Published researcher (IJRASET, Feb 2026)** with a strong foundation in **OOP principles**, **Data Structures & Algorithms**, and relational database design with **MySQL**. Proven track record of delivering **45–70%** efficiency improvements across backend systems. Adept at designing scalable, maintainable **RESTful** services with **Spring Security (JWT)**, **Hibernate/JPA**, and **React-based frontends**. Actively expanding expertise in **Docker**, **Cloud deployment (AWS)**, and **CI/CD** pipelines.

Technical Skills

Backend: Core Java, Spring Boot, Spring Security, REST APIs, Hibernate, JPA, Maven, Express.js, Node.js
Frontend: HTML5, CSS3, JavaScript(ES6+), ReactJS, Tailwind CSS
Database & Tools: MySQL, JDBC, Git, GitHub, Postman, Docker, AWS
Concepts: Object-Oriented Programming(OOP's), Data Structures & Algorithms, DBMS, Microservices

Projects

Role-Based Leave Management System (Core Java, Spring Boot, React, and MySQL) Github

- Designed and implemented a **microservices-based** Leave Management System with **Spring Boot** backend and **ReactJS** frontend, enforcing role-based access control across **3 roles (Employee, Manager, Admin)** using Spring Security with **JWT authentication** and stateless session management reducing manual processing time by **70%**.
- Engineered **15+** RESTful API endpoints **(GET, POST, PUT, DELETE)** with versioning, pagination, and centralized exception handling using **@ControllerAdvice**, documented via **Swagger/OpenAPI** sustaining **100+** concurrent sessions with **sub-200ms** response time, validated end-to-end via Postman test collections.
- Designed a normalized MySQL schema (3NF) with indexed foreign keys across **5 tables (Users, Roles, Leaves, Departments, Approvals)**, reducing query execution time by **40%** and ensuring referential integrity through Hibernate/JPA ORM mappings with lazy loading strategy.

Hospital Queue Management System (Java, Spring Boot, REST APIs, MySQL) Github

- Architected a priority based hospital triage engine using **Java PriorityQueue** with a custom Comparator ranking patients by acuity level **(Critical, Urgent, Standard)**, backed by Spring Boot REST APIs and MySQL persistence processing **100+ concurrent patients** and reducing critical patient wait times by **45%** versus traditional FIFO workflows.
- Improved staff operational efficiency by **30%** across a **1,000+ patient** record dataset by replacing linear FIFO scans with **O(log n)** heap-based queue operations, cutting average queue re-evaluation time from **O(n) to O(log n)** and enabling real-time priority updates via REST API triggers.
- Designed a stateless REST API layer enabling horizontal scalability, with paginated patient record responses **(Spring Data JPA Pageable)** to prevent payload overload supporting consistent **sub-300ms** response times under simulated peak load of 100+ concurrent requests.

PeerTube - YouTube Clone (React, JavaScript, TailwindCSS, HTML5) Github

- Developed a fully responsive YouTube Clone using **React.js (Vite)**, **Tailwind CSS**, **React Router**, and **YouTube Data API v3**, implementing **8+ core features** including video search, trending feeds, category-based browsing, channel pages, embedded video playback, related videos, dark mode, and **infinite scrolling across desktop**, tablet, and mobile devices.
- Designed a scalable frontend architecture with **20+** reusable **React components, Context API, custom hooks, Axios service modules**, and route-based lazy loading, reducing code duplication and improving maintainability through a modular component-based structure.
- Integrated **5+ YouTube Data API** endpoints to fetch real-time **videos, search results, channel details, related videos**, and comments while implementing loading skeletons, **API error handling**, Local Storage persistence, and optimized rendering to deliver a smooth user experience.

Experience

Software Development Intern – ITJOBXS May 2025 – June 2025

- Designed responsive UI components using **HTML, CSS, Bootstrap, and JavaScript**.
- Implemented **secure user validation mechanisms** including email validation and **Google reCaptcha**, reducing bot registrations by **95%** and improving database efficiency by **80%**, ensuring secure user registration on DesiQnA.
- Followed clean code practices and contributed to building maintainable, scalable frontend components aligned with project requirements.

Achievements

- Solved **150+ DSA** problems across LeetCode, Hackerrank and **GFG** with focus on **Arrays**, **Strings**, **Recursion**, and **HashMap**, **Dynamic Programming**, **Searching**.

Education

B.Tech in Computer Science and Engineering
Bonam Venkata Chalamayya Engineering College
Duration: 2022 – 2026 **CGPA:** 8.66

Higher Education in Science
National Infotech College
Duration: 2020 – 2021
Percentage: 86%
